

## Installing the RevoClip<sup>2</sup>

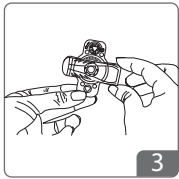

Depending on your iSkin, you will receive one of these two clip retainers.

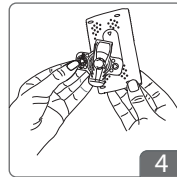

1 Insert the clip retainer into the iSkin with its two pegs inserted into the corresponding holes on the back of the iSkin.

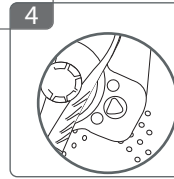

2 When properly inserted, the two pegs on the clip retainer will show at the back of the iSkin.

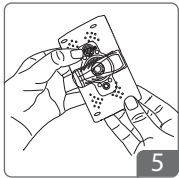

3 Next, rotate the clip clockwise to a 90 degree angle to expose the connector holes and clip lock.

4 Align the lower peg on the clip retainer with the lower hole on the clip at a 45 degree angle and insert the peg into the hole.

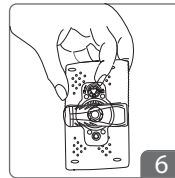

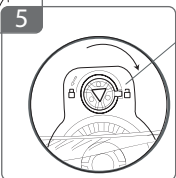

Next rotate the entire clip to the 12 o'clock position interlocking the clip with the lower peg.

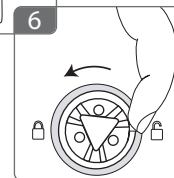

5 Insert the upper peg of the clip retainer into the top connector hole, making sure the clip lock is in the unlocked position. (See diagram below)

Clip lock (unlocked)

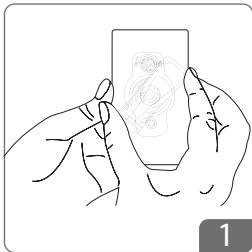

6 With the top peg properly secured, rotate the lock to the locked position.

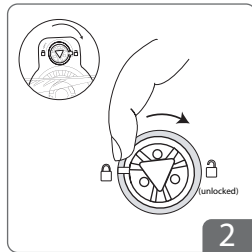

To lock the clip onto the clip retainer, use your fingernail to rotate the lock counter-clockwise to the lock position. (Failure to do so may result in the clip coming loose).

Use fingernail to rotate peg to locked position.

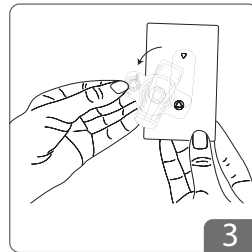

## Removing the iSkin RevoClip<sup>2</sup>

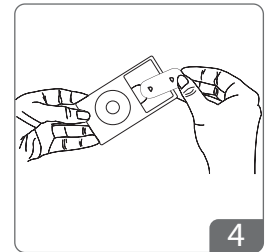

1 Rotate clip clockwise to a 90 degree angle.

2 Use fingernail or pen tip to rotate clip lock (upper peg) to the unlock position.

3 Disconnect the clip from the upper peg and rotate counter-clockwise to unlock from lower peg.

4 Remove the clip retainer from inside of the iSkin Keep clip and retainer for future use.
